Burnley Wilson Fish

Shepherd Construction Ltd.

Citation

"The corner site design had to accommodate two very different façade styles presented by adjacent buildings. The resulting geometry is both impressive and intriguing. The judges were particularly impressed by the foundation and basement solution devised by the structural engineers and by the skilled deployment of columns and floor beams to satisfy the complex open plan layout and façade support requirements."

Award certificates will be issued to all the principal organisations as identified on the nomination form. The certificates from IStructE HQ will be issued at the next Yorkshire branch meeting in September/ October 2007.
